SUMMARY

Advanced Systems Engineering student at UNICEN (graduating Dec. 2026) and University Programmer Analyst, specializing in mobile development (Swift, Flutter) and backend. I build apps end to end, from system architecture to release on the App Store and Google Play. I founded DeporTurnos, a sports booking platform I built with my partner and later sold to him, and, with a partner, TravelPic for a client.

EXPERIENCE

Freelance Mobile Developer · TravelPic · Client work, with a partner — Argentina · 2024 – 2025

- With my partner, designed the architecture and built an “Uber for photographers” platform in Flutter (BLoC), letting users hire nearby photographers through a radius-based search.
- Integrated Stripe payments and real-time maps with directions (Google Maps) on a serverless Firebase backend.
- Optimized performance and took the app through release on the App Store and Google Play.
- Development is complete; I still handle its support.

Founder and Mobile Developer · DeporTurnos · Own project, with a partner; sold — Argentina · 2021 – 2025

- With my partner, built a Flutter platform that lets sports complexes manage their bookings in real time.
- Designed the serverless backend on Firebase together: Firestore for real-time data and Cloud Messaging for push notifications.
- Integrated Mercado Pago payments and built a native real-time chat between players and venues from scratch.
- Released the app on the App Store and Google Play, where it reached 11 venues, 4,300+ users and 1,300+ bookings, and later sold the product to my partner.

PROJECTS

AI chatbot for small businesses · Own project — Python, FastAPI, Claude, pgvector, Next.js

Each client gets its own prompt and knowledge base: RAG over PostgreSQL and pgvector, with Claude as the LLM, on WhatsApp and a web widget.

Vault: personal finance · Own project — Tauri, Rust, React, TypeScript, SQLite

Local-first desktop app: data stays in SQLite on the device, with no server and no accounts.

Compiler built in Java · University course project, UNICEN — Java, Yacc, x86 Assembly

Full pipeline: lexical analysis, a Yacc parser, intermediate code and x86 assembly generation (MASM).

SKILLS

Mobile	Swift, SwiftUI, Objective-C, Flutter, Dart, React Native
Backend	Java, Python, FastAPI, Rust, C# / .NET, C / C++, REST APIs
Web	TypeScript, JavaScript, React, Next.js, HTML, CSS
Data & cloud	PostgreSQL, MongoDB, Firebase, Supabase, SQLite, Docker
AI	Claude API, RAG, Rasa, Machine Learning
Tools	Git, GitHub, Xcode, TestFlight, Figma, Tauri, Scrum

EDUCATION

Systems Engineering (advanced student, graduating Dec. 2026) · National University of the Center of the Province of Buenos Aires (UNICEN) — 2020 – 2026

University Programmer Analyst · UNICEN — 2020 – 2026
